

BUSINESS FUNDAMENTALS: PREDICTIVE MAINTENANCE OF SIMULATED AIRCRAFT GAS TURBINE ENGINE

METIS BOOTCAMP | June 25, 2021

Presented by: Kalu Uga

OUTLINE

- Problem Statement
- Dataset/EDA
- Interactive Dashboard - Tableau
- Future Work

PROBLEM STATEMENT

Using historic dataset to find failure patterns that could be used to predict failures in the future.

Catastrophic
Failure

Damaged
Reputation

Loss of Future
Work

IMPACT OF ENGINE FAILURE

- Catastrophic Loss
 - Fatality
 - Reputation Damage

Incident Severity	Total Non Productive Time	Total Estimated Loss (\$)
LIGHT	< 4Hrs	< 10K
SERIOUS	> 4 Hrs - < 24 Hrs	> 10K - <100K
MAJOR	> 24 Hrs - < 48 Hrs	> 100K - < 1000K
CATASTROPHIC	> 48 Hrs	> 1M

- Business Impact

Reduce the quarterly rate of engine failure.

IMPACT HYPOTHESIS AND SOLUTION PATH

Impact Hypothesis

Predicting engine failure will help reduce rate of engine failures since maintenance will be scheduled accordingly.

Solution Path

Build a model to predict when an engine is likely going to fail.

ASSUMPTIONS AND MEASURE OF SUCCESS

- Assumptions

- ✦ Highly reliable Real-Time sensor readings.
- ✦ Absence of severe natural disturbances (weather)

- Measure of success

- ✦ Predicting over 70% of failures.
- ✦ Parts can be salvaged from an engine that did not fail catastrophically

- Temperature Sensor

- Accelerometer

DATASET - NASA TURBOFAN DATASET (100 ENGINES)

Train Dataset
20631 x 26

Test Dataset
13096 x 26

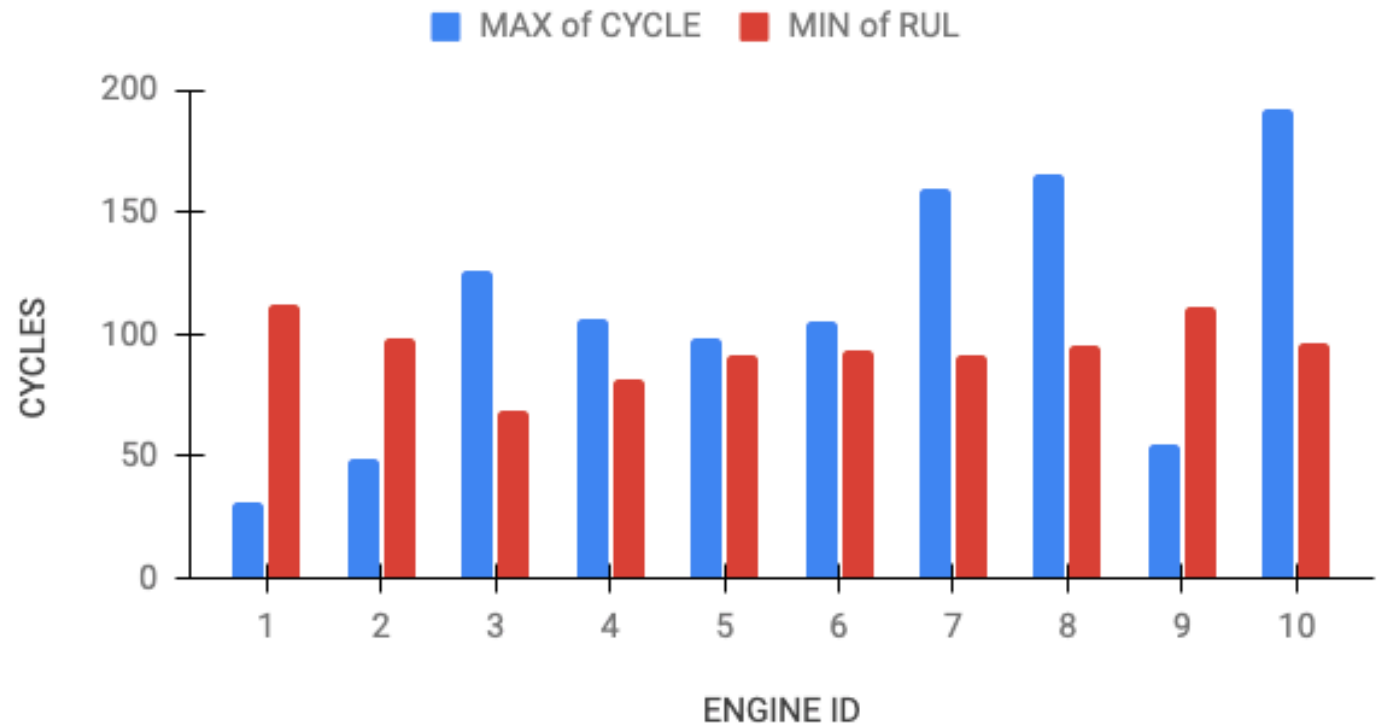

Remaining Useful Life (RUL)
100 x 1

26 Features

- Engine ID
- Operation Settings
- Cycles of operation
- 23 sensor readings

■ Test dataset

Max Cycle and Min RUL per Engine

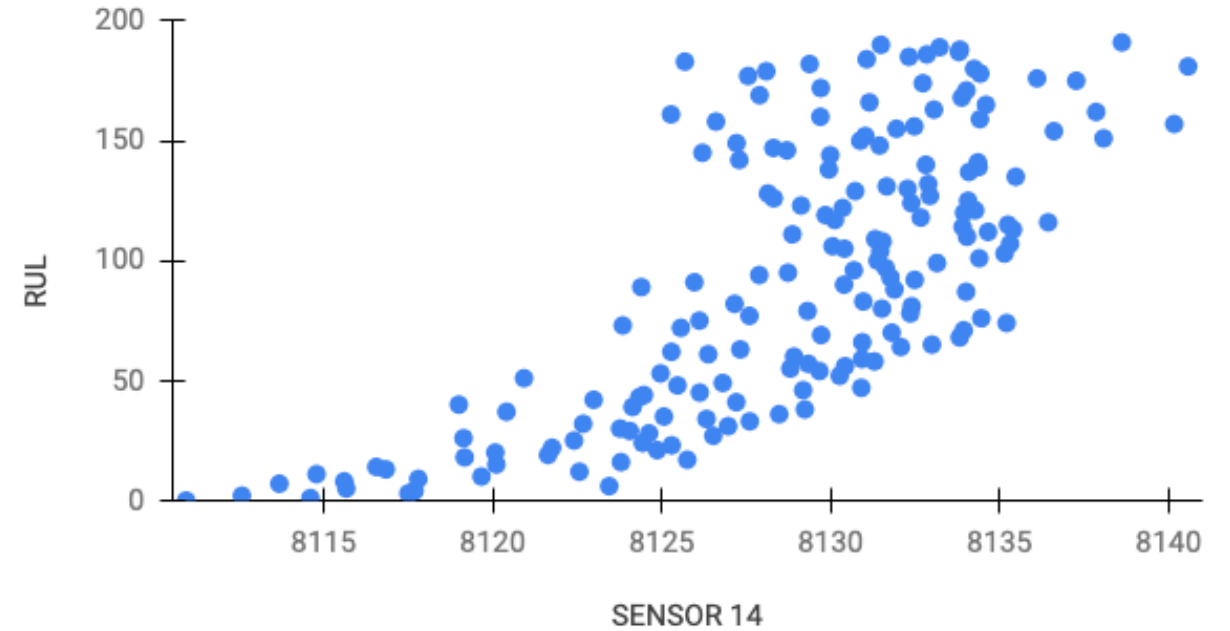

EDA - TRAIN DATASET

Scatter Plot of SENSOR 2 (Engine 1)

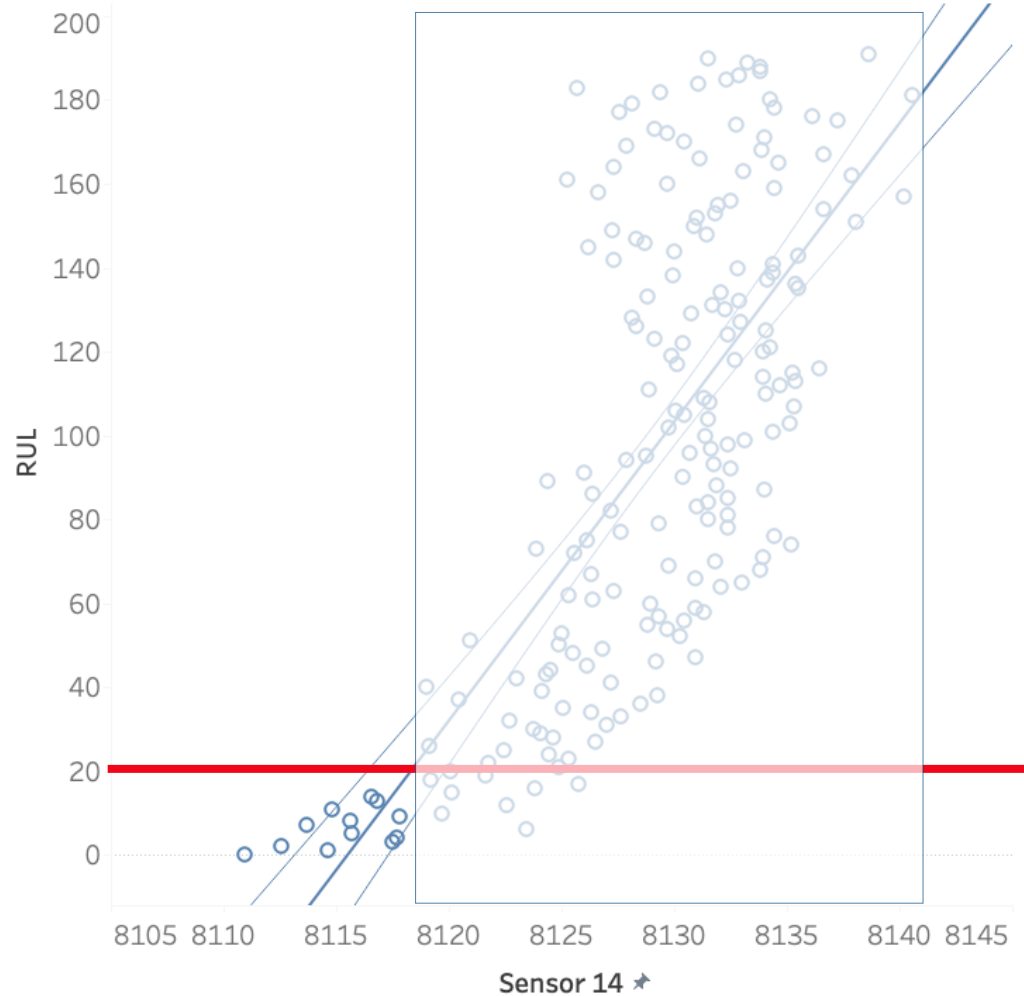

Scatter Plot of SENSOR 14 (Engine 1)

EDA - TRAIN DATASET

Positive Trend - RUL and SENSOR 14 (ENGINE 1)

MODELLING

- Classification model - Gradient Boosting Classifiers (Label by set RUL)
- Regression - Survival Models (Predict RUL)

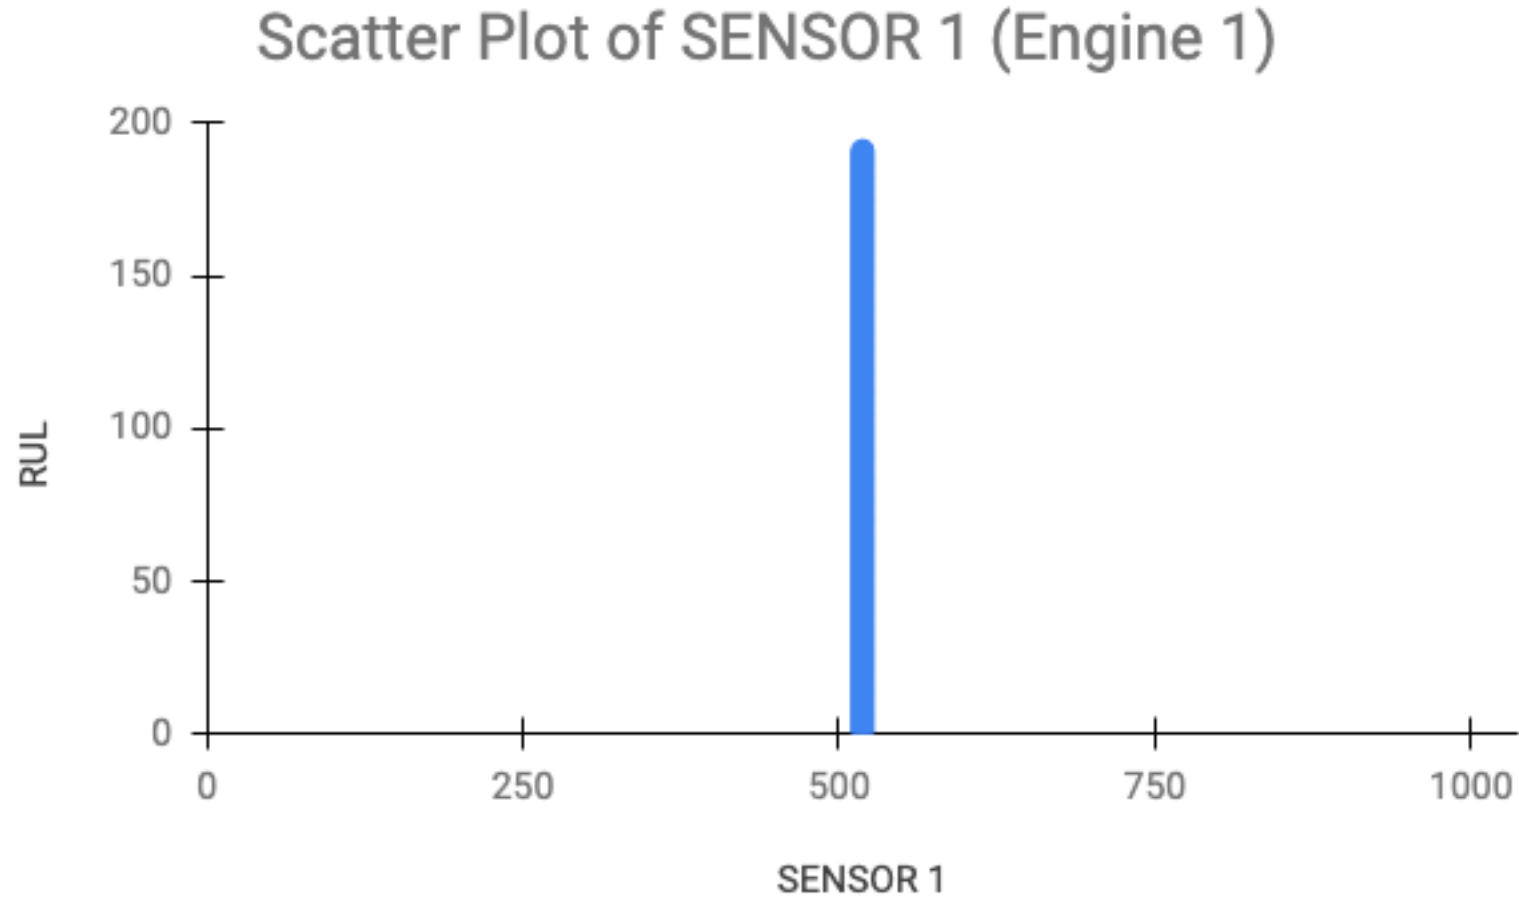

INTERACTIVE DASHBOARD - TABLEAU

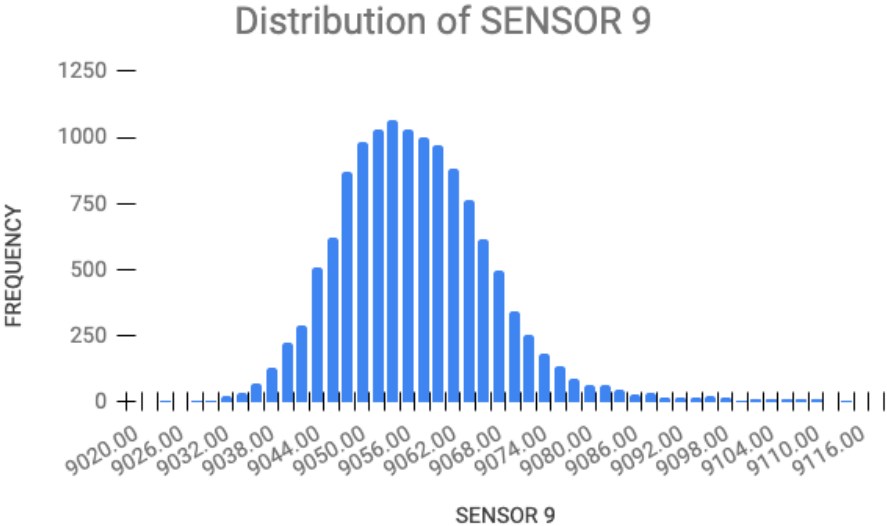

FUTURE WORK

- Build a regression model using python packages.
- Build a classification model using python packages.
- Update dashboard to show predicted and actual RUL of test set from regression model.

APPENDIX - TRAIN DATASET

APPENDIX - TEST DATASET

APPENDIX - TEST DATASET

SENSOR 2 readings on Engine 2

SENSOR 2 reading for Engine 89

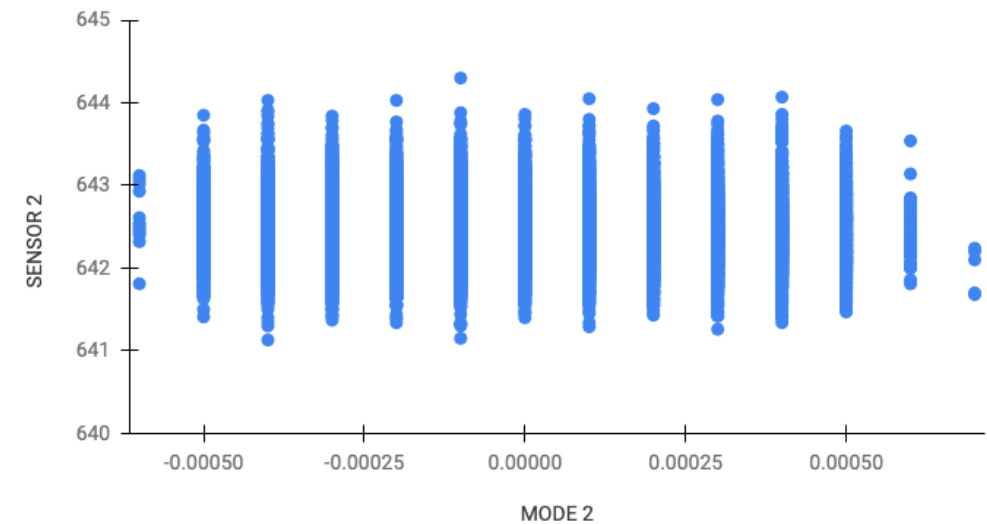

APPENDIX - TEST DATASET

Scatter plot of MODE 1 and SENSOR 2

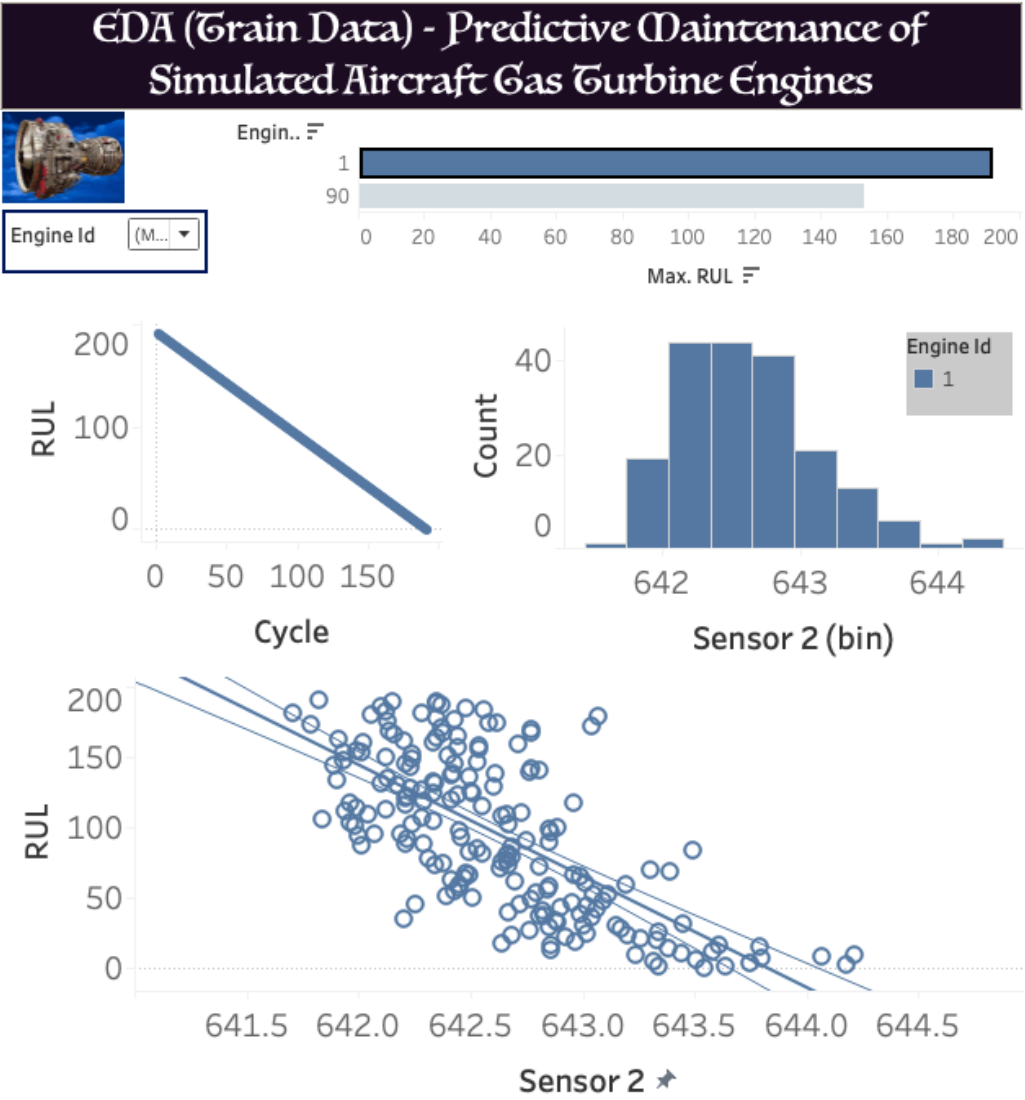

Scatter plot of MODE 2 and SENSOR 2

Scatter plot of MODE 3 and SENSOR 2

APPENDIX - TABLEAU

INTERACTIVE DASHBOARD
